# SPWorldClock

---

*SharePoint World Clock Solution*

## **Content**

1. Installation and activation .....	3
2. Usage and settings .....	4
3. Timer job settings .....	5
4. Uninstallation .....	5

## 1. Installation and activation

1. Create „wsp“ folder in your C:\ and copy the solution wsp in there so the path looks like this  
**C:\wsp\SPWorldClock.wsp**

2. Deploy the wsp file to the server using the given **example** commands (Sharepoint Shell) - >  
**you'll have to change orange parts according to your needs**

```
• Add-SPSolution -LiteralPath C:\wsp\SPWorldClock.wsp;
```

3. Install the solution to the server (**be carefull to change http to https if you are using it**)

```
• Install-SPSolution -Identity SPWorldClock.wsp -gacdeployment;
```

4. Activate the solution on desired url (site collection)

```
• Enable-SPFeature -Identity "SPWorldClock_SPWorldClock" -url  
"http://intranet.contoso.com/"
```

5. Open site collection features and activate SPWorldClock feature

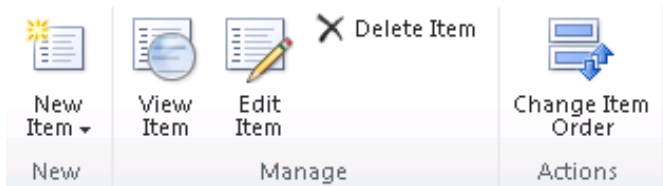

## 2. Usage and settings

Under desired site collection go to -> Site Actions -> site settings -> SP World Clock Configuration

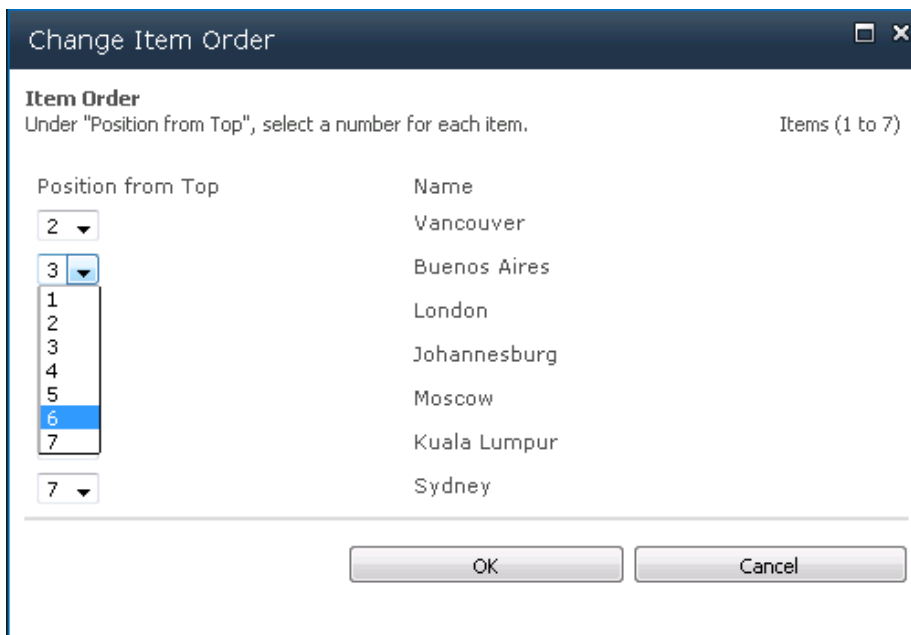

There you will find default list values for SPWorldClock.

You can edit, remove or add new city to the list.

When you add new city, you have to fill the country so the plugin knows where the city is (Keep in mind that there are numerous cities worldwide with same name).

You can also reorder cities according to your wishes.

If you added a new city, you will have to run the timer job manually to see the changes.

### 3. Timer job settings

In your central administration, under timer job list you can find: *SP World Clock Timer Job*

You can adjust timer job run schedule according to your needs.. Default it's set to daily schedule between 3:00 and 4:00 AM. – **this schedule assures that clocks will be correct every day.**

**For optimizing server and sharepoint performance, recommended is weekly schedule, on Sunday, between 3:00 and 4:00 AM.**

### 4. Uninstallation

*Use the following commands in Sharepoint shell:*

- `Disable-SPFeature -Identity "SPWorldClock_SPWorldClock" -url "http://intranet.contoso.com/"`
- `uninstall-spsolution -identity SPWorldClock.wsp;`

WAIT APPROX. 30 seconds for command to finish and then type:

- `Remove-SPSolution SPWorldClock.wsp;`
